

WC Eng Challenge

Org Chart

Please write a Go back-end that first checks to see if the Employee data exists in the database, and if not, retrieves it from the /employee endpoint. In either case, the React front-end should render the results in the browser as a display them as a nested list according to the following logic:

1. Employees are displayed with full name and title.
2. Employees are nested underneath the manager they report to, eg:
3. When a manager has more than one report, sort reports alphabetically by last name.

Employee Endpoint

Retrieve the Employee data from this URL:

<https://gist.githubusercontent.com/chancock09/6d2a5a4436dcd488b8287f3e3e4fc73d/raw/fa47d64c6d5fc860fabd3033a1a4e3c59336324e/employees.json>

Example Output

Your output should look something like this:

- CEO: Michael Chen
 - CTO: Barrett Glasauer
 - Engineering Lead: Chris Hancock
 - Engineer: Shrutika Dasgupta
 - Engineer: Julian Early
 - COO: Andres Green
 - Operations Lead: Ryan Miller
